

# DERMASWEEP

The logo for DermaSweep features the brand name in a bold, dark blue, sans-serif font. A large, thin, dark blue arc curves over the letters 'A' and 'S', starting above the 'A' and ending below the 'S'.

## **Why do bristles work?**

The DermaSweep Bristle tips have been designed to allow for airflow throughout the bristle. This unique quality causes the skin to be gently drawn into the bristle which results in a more effective exfoliation that most patients find less irritating to the skin. Additionally, this airflow design allows the vacuum pressure to be used in a safe yet increasingly effective manner. This more efficient use of the vacuum enhances results by effecting deeper layers of skin. The multiple bristle tips provide an unmatched capability to customize each treatment depending on skin type, desired level of exfoliation and desired results.

## **Do Bristles Matter?**

With the DermaSweep, nothing matters more than the bristles. The unique patented bristle tips are the key to next generation microdermabrasion allowing for increased efficacy and true epidermal serum infusion with Epi-Infusion level of exfoliation. Developed with polyester or nylon the bristle tips completely eliminate the mess and hazards associated with traditional crystal systems. **Even more impressive the bristles prevent the build up of keratin on the wand that has been a problems with other particle-free systems.** Without the airflow throughout each bristle tip, the full efficacy of the vacuum is difficult to achieve. The result is a clean, consistently effective treatment that patients/clients enjoy. More importantly, patients/clients see a noticeable skin improvement with fewer treatments as well as increased efficacy as compared to other systems.
